Keep reading to learn the basics of furnace repair. Why Do Furnaces Need Repairs? The most common reason furnaces need repairs is because of a lack of maintenance. Once they have identified the problem, they can provide you with a quote for repairs and move forward with those repairs once you authorize them. When the light comes on, the car is telling you that something is wrong, but unfortunately, it does not tell you exactly what is wrong. Consider it an investment that will help you avoid furnace repairs. An auto repair shop, such as ours at Morgan Auto Repair, can run a diagnostic test on your car and determine what is going on. Most importantly, the HVAC specialist can pinpoint and fix small furnace problems before they turn into costly repairs. Always change the filter regularly. Scheduling regular maintenance on the furnace is an excellent way to minimize repairs and extend the life of the unit. Call us today to schedule an appointment at one of the repair locations in Tracy, Manteca and Stockton. We also have a Sacramento location opening soon. The efficiency of your home's furnace greatly impacts your heating expenses. It traps airborne particles like dust, dirt and allergens. MORE FROM QUESTIONSANSWERED.NET This is especially important if you or someone in the home suffers from allergies or asthma. This causes the furnace to work harder than it should to keep the home at your desired temperature. A qualified HVAC technician can guide you with expert advice and explain whether it's better to repair or replace the furnace. How to Avoid Furnace Repairs? Don't look at furnace maintenance as an expense. If you have never had one done before, you may wonder what it is, how it affects repairs and why it is important. What Is a Diagnostic Test? If there is a problem with a part in your car, such as the engine, the transmission, the exhaust system, the fuel injectors or the ignition coils, the check engine light will illuminate. A simple way to avoid this is to change the filter at least once a month. Why does frequent cycling cause furnace repairs? If the oven is cycling and turned off more than three times an hour, contact an HVAC specialist to inspect and repair the system. Once they determined which part of the car was experiencing problems, they could perform additional tests to determine the exact problem. From there, we can complete the repairs and get back on the road. Other common causes of furnace repairs include: Dirty filters Electric ignition problems Frequent Cycling Ruidy Oven Wear and tear Faulty Thermostat Pilot Light Issues Why do dirty filters cause furnace repairs? The filter in a furnace filters the air into the unit. Diagnostic testing involves connecting a test device to a component in your car, which then returns a code. Newer cars have electrical components, and the diagnostic test device can read these electrical components to determine which part of your car is having a problem, or repair needs. Why is a diagnostic test important? One of the common misconceptions related to an engine control light is that it will only turn on if something is wrong with your engine. During a maintenance session, a professional heating, ventilation and air conditioning (HVAC) contractor will evaluate the effectiveness and efficiency of the furnace and make the necessary adjustments. Light can come for a variety of parts and systems inside your car. The contractor can inspect damaged parts and replace them as needed. This is why dirty filters lead to furnace repairs. Diagnostic tests won't tell a mechanic exactly what's wrong with car, but can identify which part of the car is experiencing problems, allowing a mechanic to find the exact problem significantly faster. What is done after a diagnostic test is done. Once a diagnostic test is done, the mechanic will know what part of your car is experiencing problems. This adds unnecessary wear and tear and can result in frequent repairs. If you have a pet in the home, a high-efficiency filter can trap pet dander to keep it from circulating throughout the home. The first thing that an auto repair shop will recommend is running a diagnostic test. This is not true. As the filter gets dirty, however, it makes it difficult for the furnace to produce heat. Frequent cycling means the furnace is struggling to heat the home to the temperature set on the thermostat. If you have indoor pets, check it once every 10 days. Common causes of frequent cycling are dirty filters, faulty thermostats and improper airflow. How Much Do Furnace Repairs Cost? The cost of a furnace repair can be in the range of \$30 to \$500 or more. If it's dirty, change it. As a result, it adds unnecessary wear and tear on the system. Before cars had electronic components that allowed for diagnostic testing, an auto repair shop would have had to spend hours or days trying to pinpoint what component was experiencing problems. If your check engine light comes on, you will want to bring your vehicle to a car repair shop in a timely manner. Pet dander causes filters to clog quickly. By the time the work is complete, your check engine light will be off and your car will be good to go. If your check engine light is on, you are in need of a car repair. From there, they can begin to exam and troubleshoot that particular part of your car, determining what exactly is going on and why your check engine light has come on.
